BOOK SYNOPSIS

How parents can teach their young drivers to detect and avoid the 13 most common vulnerabilities killing teenage drivers. Parents of teenage drivers: Can you name the 13 most common vulnerabilities that will catch your teenage driver or teenage passenger off guard and force them into making a split-second life or death decision? Saving Our Teen Drivers is written by a commercial pilot with over 25 years of flying experience and details how professional aviation training on accident avoidance and the decision making process can help younger drivers detect and avoid the 13 most common causes of teenage driving deaths. 80 percent to 90 percent of teenage driving deaths are attributed to driver decision error. For years, several aviation organisations have dedicated millions of dollars to better educate pilots in reducing pilot decision error. This critical knowledge is transferable to drivers of all ages -- and is especially vital to younger and inexperienced drivers. The book is written to empower parents in educating their children, from a pilots point of view, on how to reduce their odds of having an accident. Any driver between 15 to 19 years old will directly benefit from this knowledge and experience.
