BOOK SYNOPSIS

The management of venous disease is undergoing a revolution in science and therapy. The public health burden, and the number and complexity of venous interventions, continue to rise, highlighting the unmet need for a review of the current treatment paradigms and techniques now available. This book meets that need, covering varicose veins, venous thromboembolic disease, and arteriovenous malformations from initial presentation through imaging and diagnosis to general and advanced therapies. The authors are the leading experts in the field, and their work in this volume is intentionally focused only on current and relevant information about endovascular management of both simple and complex venous problems. This book will be an invaluable asset for venous therapists at all levels.
